- Two 8" zip ties
- .028" Wall thickness
- Venting in top half

Details

Best Seedling Tube in terms of growth and Survival

Miracle Tubes performance in the field exceeded the wildest expectations of the designers is attested to by top performance in independent growth and survival tests against other tube-type shelters.

Heat problem solved with Vented Tree Growing Tubes

Tree Pro designers knew from prior experience with the Tree Pro tree protector design that excessive heat retention was the cause of most of the problems of other shelters.

They therefore formulated a polyethylene material that had just the right color and density to promote good tree health.

Installation

Easiest Tree Grow Tube Installation

After planting the tree in accordance with proper tree planting directions, pound or press the stake into the ground at a distance from the tree equal to about one-half the diameter of the protector. Then slide the zip ties over the stakes, while push the tube to the ground. Finally, pull the zip ties tight and your tree is protected.
